

## East Locust Street Paving Project

- E Locust Ave From N Maryland Ave to N Lake Dr
- Roadway will be narrowed to 36' in width from curb face to curb face (currently varies between 38' and 40')
- Existing road will not be entirely removed, so disruption during construction will not be extensive
- Due to the road narrowing, all curbs will be replaced
- Curb bumpouts will be installed at most intersections (where these are installed, street will narrow to 24')
- New pavement surface will be asphalt
- Sidewalk areas will be wider as a result of the roadway narrowing
- Sidewalks will be replaced on some blocks
- 10 new trees will be planted over the course of the project (4 will be removed), so a total of 6 trees will be added
- Intended project results: slower traffic speeds and increased pedestrian safety
- Should be completed by the end of November

\* An asphalt surface overlay project (no new curbs or sidewalk) will begin soon on E Locust St between N Bartlett Ave and N Oakland Ave. The work is scheduled to be completed by October 4th.
