

As summer gives way to autumn's splendor,
Hence forth comes harvest and winter,
Wherefore we stand in awe of falls candor,
So to this end, road construction comes hinter.

The light at the end of the tunnel
Construction season to come to an end

*** West Good Hope Road Rehab Project from N. Teutonia to N. 76th St. ***

Hello Residents and Businesses of West Good Hope Road

Stage IV: Construction is continuing on schedule.

Extra stages have been added to the project for paving purposes. This week we should be paving the westbound lanes with the final surface of asphalt and doing finished restoration on the North side of the roadway.

Stage V: The project will then switching both lanes of traffic back to the westbound lanes. We will then raise all the manholes in the eastbound lanes, place the final surface of asphalt and then complete the finished restoration on the Southside of the roadway.

Stage VI: We will then be placing traffic in the permanent configuration and remove the temporary signals. During that phase we will also remove the temporary cross-overs on either ends of the project. We will be doing some concrete and asphalt work in this phase to construct the medians.

Access will be maintained at all times, except when construction activities are directly affecting the entrance ways to properties.

If you have any concerns or problems, please contact me as soon as possible.

Thank you,
Richard Frazier, P.E.
